1. Course Description

Students will be divided into small groups and conduct experiments, survey, and/or observations in order to learn basic methodologies to study the elements which determine human behavior, development of human behavior, social behavior, and so forth. Field study may also be conducted upon necessity. The “theme” will be prepared and offered by teaching stuffs but students themselves are required to prepare the experimental design and to collect/analyze the data, thereby learning effective methods to study various issues through the experience.
