

# 博物館資料保存論

Syllabus Number CAS-203  
Museologist Program  
Elective 2 credit  
MURAKAMI, Natsuki

## 1. Course Description

Museum collections are important for understanding the history and culture of our country or region. They are also national properties that serve as the foundation for cultural improvement and development in the future. It is our responsibility to pass them down to future generations, and museums that hold the collections play important roles. In this class, the following contents will be explained while exemplifying actual activities so that museum collections can be preserved and utilized for a long time to come.

- ① Basic knowledge of materials and production techniques about museum collections
- ② Scientific analytical methods for museum collections
- ③ Deterioration factors and their control methods
- ④ Preservation technology related to museum storage and exhibition
- ⑤ Preservation and utilization of local cultural resources
- ⑥ Disaster prevention
