

Japan's Industries I

Syllabus Number

ECP-213

Elective

2 credit

EMOTO, Nobuya

1. Course Description

This course continues through spring semester (as International Economics I) to autumn semester (as International Economics II). This course aims to give students the general knowledge on steel and iron industry of Japan and other countries. Steel and iron industry seems to be a typical "old economy". But Japan still has kept international competitiveness in this industry. In this course, students will understand why Japanese steel and iron industry is still strong in the world.
