

Theory of Eco-Society

Syllabus Number	ENS-101
Elective	2 credit
TOOYAMA, Tomohisa	

1. Course Description

This class offers an opportunity for students to acquire the skill of economic thinking by observing several real economic activities as environmental protection, financing, government intervention, and so forth. We will use tools from the game theory, the price theory, and the industrial organization theory in micro economics. Students need to understand these theories and submit your essay at the end of the lesson.
