統計学入門 II

INOUE, Yoshikazu

1. Course Description

In this lesson, I emphasize being able to correctly read how to relate variables from statistical graph. Among various graph forms of statistical data, correlation diagrams and scattergrams are high in abstraction level and are used to express correlation and data distribution state. We will learn the basic terms and concepts for reading graphs, while taking correlation diagrams and scatter charts created in various fields and themes, and read the features shown by concrete graphs.
