

統計学入門 I

Syllabus Number

STS-101

[VI]

Elective

2

credit

INOUE, Yoshikazu

1. Course Description

In this lesson, we focus on becoming able to read the statistical graph correctly.

Among the various graph formats of statistical data, bar graphs are familiar graphs that are low in abstraction level and easy to understand with a sense of realism. While taking up bar charts created in various fields and themes, students learn basic terms and concepts for reading graphs and interpret the features shown by concrete graphs.
