

化学入門 II

Syllabus Number

BSC-102

[VI]

Elective 2

credit

YASUOKA, Takashi

1. Course Description

In this course, you will learn history of natural science, basic chemical theories, environmental chemistry in relation to our daily life. Therefore, you can understand that chemistry is related to all aspects of daily life, and get into the habit of watching daily life from the view point of chemistry. Since it is not an exaggeration to say that a voluntary learning of chemistry begins with your curiosity asking why, you will be well trained to have any questions during this course. Basic academic skills about chemistry are not necessary, and you do not need to take Introduction to Chemistry I in advance.
