YASUOKA, Takashi

1. Course Description

In this course, you will learn history of chemistry, atomic structure and basic chemical theories in relation to our daily life. Therefore, you can understand that chemistry is related to all aspects of daily life, and get into the habit of watching daily life from the view point of chemistry. Since it is not an exaggeration to say that a voluntary learning of chemistry begins with your curiosity asking why, you will be well trained to have any questions during this course. Basic academic skills about chemistry are not necessary in advance.
