

Cognitive Psychology II

Syllabus Number

EXP-301

Elective

2 credit

MIYAWAKI, Kaori

1. Course Description

This course is an advanced introduction to cognitive psychology. Students will develop an understanding of major areas and some of the current hot topics in this field: perception, memory, decision making, language, attention, everyday cognition, cognitive engineering, and human error. We will use a lecture format, but sometimes engage in active learning, for example, taking part in experiments and solving problems. Grading will be based on the class attendance and assignments.
