

Life on Earth

Syllabus Number

EDU-105

Compulsory Elective
2 credit

MAEJIMA, Masaaki

1. Course Description

Students will learn the changes in life from the beginning of life on planet Earth to the present, understand what life is, the relationship between life and the history of the earth, and the diversity of life. In addition, students will learn about natural science mechanisms, their history and current status, and social responses to various global environmental issues that are currently occurring. And they will deepen their understanding of the impact of human activities on the global environment and consider what sustainable development should be.
