

Medical Science in Daily Life 2

Syllabus Number

BAM-102

Elective

2 credit

TOGISAKI, Tooru

1. Course Description

This course aims to learn knowledge of the physical structure and diseases that should be acquired as a university student. You can learn medical science based on physiology. In this course, you will be able to learn about familiar or common diseases and basic life support.

You will also learn about the Japanese medical system, its problems, and the mechanism of medical institutions. You can also learn about the medical economics and businesses around medical care.

In the 7th lecture, we will give an interactive lecture on "view of life and death" through a neurological intractable disease called amyotrophic lateral sclerosis (ALS).
