

Practical on Statistics and Survey Data Processing II

Syllabus Number

STS-204

Compulsory Elective
2 credit

IKE, Shuichirou

1. Course Description

This practical course deals with the basics of quantitative analysis in social science. It starts with the use of spreadsheet application software, advancing to the use of statistical package "SPSS". Students will be able to obtain skills on cross-tabulation, descriptive statistics, correlation analysis, regression, ANOVA, and statistical tests will be involved. Accordingly, they learn the sophisticated skill of the spreadsheet application.
