観光統計法 II

HANAI, Tomomi

1. Course Description

In this course, the students will learn basic statistical analyzes. They will learn how to analyze secondary quantitative data like touristic statistics, surveys and government data. After that, they will try to simulate how they input, tabulate and analyze data statistically using fictional data. The students will try to conduct the multivariate analyzes using the statistic functions of Excel and the application R, and export the results to Excel format and create tables and graphs which is suitable for the normal survey report using Excel.
