

Data Analysis I

Syllabus Number

STS-301

Elective

2 credit

INOUE, Yoshikazu

1. Course Description

In this lesson, you learn about three analytical methods: crosstab analysis, average value comparison, correlation analysis. Both of these are methods for examining the relationship between two variables and are the most basic when analyzing the quantitative data obtained in the questionnaire survey. Also learn how to operate the statistics software SPSS, how to read and describe the output result.
