

心理学研究演習 I

Syllabus Number

SEM-301

Compulsory 2
credit

KURODA, Miho

1. Course Description

Psychology is the scientific study of behavior and mental processes, including perception, cognition, attention, emotion, intelligence, subjective experiences, motivation, brain functioning, and personality. In this seminar, we learn the critical skills to evaluate others' research and conduct your own scientific research in psychology. This class is very important because you learn how to conduct research about behavior and arrive at those conclusions, and how to think as a psychologist.
