

# 物理学入門Ⅰ

Syllabus Number

PHC-101

[VI]

Elective

2

credit

MIYASHITA, Atsushi

## 1. Course Description

For those who do not major natural sciences, 'physics' may seem to be a difficult field where you have to manipulate complicated mathematical equations. On the contrary, it is a branch of science where basic laws of nature are being searched for in order to understand and describe natural phenomena as simple as possible. It would be worth while learning how a limited number of basic laws of nature are applied to specific examples without going into detailed calculations.
