

心理学研究法Ⅱ（心理調査計画法）

Syllabus Number

PSY-204

Compulsory Elective
2 credit

SHIKISHIMA, Chizuru

1. Course Description

Students will systematically learn the methods required to conduct psychological research as an empirical science. In particular, the course will focus on questionnaire surveys and social research methods. Students will gain a proper understanding of the procedures necessary to test hypotheses, and ethical considerations for research will be discussed in detail, using case examples. We hope that students will develop the ability to formulate their own plans for psychological research, and link this to their own research.
