Basic Practical on Contents Producing

FUJITA, Yoshikatsu

1. Course Description

This course aims to learn basic knowledge and skills for radio content production.

Today, radio programs can be listened anytime anywhere all over the world through the Internet, in contrast with a couple of decades ago when the broadcasting is the only way to deliver the contents. In addition, emerging technologies such as voice synthesis software (Voiceroid) plays vital role in creating robotic characters in some radio programs, which will lead to share jobs with human announcers. We will also survey the future of coming radio contents production and investigate the expected society built on human and AI communication.
