

Introduction to Microeconomics II

Syllabus Number

ECT-102

Compulsory Elective
2 credit

SHIMIZU, Haruhiko

1. Course Description

Based on the topics covered in "Introduction to Microeconomics I," we will continue studying the following topics: imperfect competition, market failure, uncertainty, and game theory. To understand the decision theoretic topics, we will also study the basic statistics such as expectation and variance. Taking up a course in Statistical Analysis I (or III) will be great help, but not necessarily required.
