

Introduction to Microeconomics II

Syllabus Number

ECT-102

Compulsory Elective
2 credit

OKUDA, Hidenobu

1. Course Description

Microeconomics is the most basic knowledge of economics. This class is designed for those who learn microeconomics for the first time, and will explain the basic terms of economics and basic analysis tools. By taking both of "Introductory Microeconomics I" and "Introductory Microeconomics II", you will go through the basic discussions on consumption (household), production (company), and market (balance between supply and demand). In addition, I would like to enable you to think about simple daily economic problems using economics.
