

Statistics for Psychology II

Syllabus Number

STS-102

Compulsory 2
credit

IJJIMA, Yuudai

1. Course Description

For quantitative studies in psychology, statistical analyses are used to demonstrate psychological phenomena. Thus, the knowledge of statistical analyses is important to adequately understand literatures in psychology, to conduct research, and to write a report or graduation thesis. In the second semester, I lecture statistical technique used in psychology on the basis of the basic knowledge of statistics.
