

Air Traffic Control

Syllabus Number

2E203

Basic Major Subjects

Elective Requisites 2
credit

IMAI, Michio

1. Course Description

Students will learn about areas where air traffic control is carried out. Also, students will learn about the tasks and the utilization. Mainly, this course is a lecture style, but practical training may be held as needed. Please study knowledge and technique related to DP2.

This course is taught by teachers with practical experience. The instructor is involved in the helicopter operation in a company, and in class, discussions are held on topics such as actual examples and actual experiences in the company and issues on the site.

2. Course Objectives

Students will study about air traffic control systems currently in operation. Understand how aeronautical safety is secured by those systems. Also, please study the English vocabularies related to air traffic control and various rules.

3. Grading Policy

This course is evaluated by the result of the exam (80%) and quizzes (20%).

The answer of each quiz will be explained.
